AC Motor Protection / Stanley E. Zocholl

p. cm.

Includes bibliographical references.

ISBN 0-9725026-0-2 (spiral) 0-9725026-1-0 (pbk.)

1. Electric motors, alternating current.
2. Electric motors—Protection. I. Title.

TK2781.Z63.2002

Second Edition: August 2003

Printed and Bound in the United States of America.

Contents

Introduction	1
AC Motors	3
Synchronous Motors	4
Induction Motors	5
Motor Characteristics	6
Induction Motor System	6
Estimating Input Data	8
Defining the Electrical Model	9
Defining the Mechanical Model	13
Defining the Thermal Model	17
The Motor Analysis	22
Epilogue	25
Protection Using Thermal Model	28
Thermal Protection	28
Starting and Running States of the Thermal Model	31
Fault Protection	36
Motor Thermal Limit Curves	37
Rotor Thermal Limit	39
Stator Thermal Limit	40
Motor Protection Requirements	44
Pullout or Stall Protection	44
Normal Starting	45
High-Inertia Starting	48
Speed Switch Supervision	50
Impedance Relay Supervision	50
Phase and Ground Protection	52
Differential Protection	56
Running Overload Protection	60

Thermal Versus Overcurrent Model	63
RTD Temperature Sensors	70
Current Balance Protection	71
Abnormal Voltage	73
Synchronous Motor Protection	74
Drive Protection	78

Guidelines for Calculating Settings for Motor Protection Relays 79

Required Motor Data	79
Estimating Motor Data	80
Selecting CTs Used for Motor Protection Relaying	80
CT Ratio	80
CT ANSI Rating	81
Setting Guidelines	83
Phase and Residual O/C Settings	83
Overload and Locked Rotor Settings	84

References 89
